

Scenario 1: Startup & Configuration

Objective: Verify application starts and connects to database. **Pre-conditions:** MySQL server running, Database `eshop_db` created.

1. **Configure:** Edit `config.json` with incorrect password.
2. **Run:** Execute `python -m src.main`.
3. **Expected:** Application prints error message or fails gracefully (check logs/console).
4. **Fix:** Edit `config.json` to have correct database name and login + password.
5. **Run:** Execute `python -m src.main`.
6. **Expected:** Application starts and serves at `http://127.0.0.1:5000`.
